

Experiments to try at home!

Note: Make sure you have an adult to help you when trying these experiments!

Changing the Colour of Flowers!

You will need:

- White flowers (Carnations or roses work well and you can even try cabbage or celery!)
- Water glasses or vases

- Water
- Food colouring
- Scissors

What to do:

1. Fill each of your water glasses about three-quarters full of water.
2. Add food colouring to each glass. Try around 15 drops, but the more you add, the more vibrantly coloured your flowers will be.
3. Use the scissors to snip the bottom of the stem of each flower.
4. Place a flower or two into each glass of water.
5. Within 30 minutes, the colour will start to appear in the flower petals. Leave your flowers overnight to see them fully change colour!
