

Experiments to try at home!

Note: Make sure you have an adult to help you when trying these experiments!

Making a bouncy ball!

You will need:

- 🥄 ½ cup warm water
- 🥄 1–2 tablespoons of Elmer's Clear Glue or Elmer's Clear Glitter Glue
- 🥄 1 tablespoon of borax or borax substitute
- 🥄 Mixing bowl

What to do:

1. Put water into the mixing bowl and add the borax. Stir until combined. (An adult should do this step with you.)
2. Squeeze in the glue. The more glue you add, the larger your ball will be. You can use just clear glue or just clear glitter glue or a combination of the two.
3. As soon as the glue touches the borax mixture, it will start to harden. Gently scoop it up and roll it around into your hands to make a ball shape. (If you have sensitive skin, use gloves for this step).
4. Once it is no longer sticky, bounce your ball!

Note: These balls are essentially just super thick slime, so if you leave them sitting somewhere for a while, they will become flat like slime. Just pick up and reshape into a ball to keep playing!
