

Experiments to try at home!

Note: Make sure you have an adult to help you when trying these experiments!

Make your own ice cream!

You will need:

- 🧴 1 cup of cream (full fat)
- 🧴 1 teaspoon of vanilla
- 🧴 Two resealable bags – one large and one small
- 🧴 Enough ice to fill the large resealable bag about $\frac{3}{4}$ full
- 🧴 1 tablespoon of white sugar
- 🧴 4 tablespoons of salt

What to do:

1. Put the cream, sugar and vanilla into the small bag and seal it tightly.
2. Put the ice and salt into the large bag.
3. Put the small bag into the large bag and zip the large bag shut.
4. Shake the large bag. You will need strong arm muscles as it will take 10–15 minutes of shaking to make solid ice cream. Enjoy!
